

ScaleHealth Private Network

Post-Checkout Activation Study

Product Cross-Sells vs Clinical Service Referrals

Internal Research | August 2026

EXECUTIVE SUMMARY

This internal study quantifies expected post-checkout conversion performance for two offer types inside the ScaleHealth private network: **product-to-product cross-sells** versus **clinical service referrals** (primarily Physiotherapy activation into the Align network).

Core Finding: Product cross-sells deliver higher immediate conversion (8–15% typical one-click range; H&W industry upsell average 22.3%). Clinical service referrals convert lower on first click (3–8% baseline lead-to-book) but generate materially higher lifetime value, exclusive patient flow into the 70+ location Align network, and brand elevation for partner properties.

Recommendation: Run a hybrid model. Sequence a high-relevance product offer first for velocity and partner economics, then present the clinical service as “protocol activation” or “expert next step.” Kill friction on the service side (one-tap consult / pre-qualified booking) to close the conversion gap. Measure full contribution margin plus downstream Align billings—not click rate alone.

Align Network Context (Current)

- 70+ active locations | Monthly gross billings tracking >\$220k (March 2026) → modeled >\$3.0MM calendar 2026
- ARPA stable \$3.4k–\$3.9k band | Median billed climbing | Core (\$3k+/mo) churn <4% annualized
- 100% of locations self-fund physio costs → locked positive gross margin (30%+) on every dollar billed
- ScaleHealth demand treated as pure upside in internal models; already visible in pipeline quality

1. CORE BENCHMARKS COMPARISON

Aggregated from 2025–2026 industry reports across 1,800+ digital businesses, Health & Wellness vertical data, and clinical service conversion studies.

Metric	Product Cross-Sell	Physio / Service Referral	Edge
Expected Conversion (post-checkout)	8–15% one-click 15–25% well-matched H&W avg 22.3% (top 35.6%)	3–8% lead-to-book baseline 8–15% optimized low-friction Landing pages 5.1–8.2%	Products for volume
Friction Level	Near-zero (same payment, one-click)	Medium (scheduling / consult intent)	Products
Immediate Economics	Strong AOV lift (+\$3+) Pure profit \$0.29–\$0.80 / txn (Aftersell H&W data)	Lower first-session cash	Products
LTV & Strategic Value	Moderate	High Align ARPA \$3.4–3.9k 30%+ gross margin Multi-session episodes	Services
Network / Moat Impact	Partner revenue share	Exclusive high-value leads into Align network + brand elevation for partners	Services
Best Trigger Context	Complementary stacks Recovery protocols Subscription attach	Fertility / hormonal → pelvic floor / MSK Physio (strong clinical adjacency)	Relevance multiplies both

2. KEY DATA ANCHORS

Product / Post-Purchase Side

- Focus Digital 2025 (1,847 businesses): Health & Wellness upsell average 22.3%, top quartile 35.6%. Best performers: supplement bundles, meal plans, coaching calls. Overall post-purchase upsells 14.6%.
- Shopify / Forrester 2025–26: Post-purchase one-click acceptance 6–12%; thank-you page 3–6%. Health & Supplements cross-sell ~4.8%, upsell 5.5% in stricter definitions.
- Aftersell H&W case data: Cart upsells ~8.5%; post-purchase AOV lifts of +\$3.49; pure profit per transaction \$0.29–\$0.80.

Service / Clinical Activation Side

- Unbounce / industry landing page data: Health & wellness median 5.1%; wellness-specific pages 8.2%.
- Physiotherapy website conversion benchmarks: average ~4.6%; optimized landing pages ~8%; Google Ads Health & Fitness conversion ~7%.
- Telehealth / app trial-to-paid: baseline 2–5%; optimized sequences reach 8–15%. Trusted referral multiplies booking likelihood significantly (friend referral ~4×).

3. PREDICTIVE MODEL FOR THE PRIVATE NETWORK

Inside a branded, high-trust post-checkout surface the conversion dynamics shift favorably versus open-web cold traffic. The private network already owns the customer relationship and payment method; the only remaining variables are offer relevance and remaining friction.

Brand Checkout Complete	
→ Product Offer Path	Expected 8–15%+ acceptance → Immediate cash + partner revenue share
→ Service Activation Path	Expected 5–10% optimized → Align network utilization + brand elevation + multi-session LTV

Why Hybrid Wins

Pure product focus leaves the clinical asset under-monetized and fails to strengthen the Align network moat. Pure service focus leaves easy, high-conversion post-checkout dollars on the table and weakens short-cycle partner economics. Sequencing product first (velocity) then service as the natural clinical continuation (depth) captures both.

Clinical Adjacency Advantage

Fertility and hormonal health properties present unusually strong clinical adjacency to Physiotherapy (pelvic floor, pregnancy-related musculoskeletal issues, hormone-driven pain and inflammation). When the service offer is framed as the logical next step in the patient's protocol rather than a generic referral, conversion rates compress toward the upper end of the service range and patient quality rises.

4. STRATEGIC IMPLICATIONS FOR SCALEHEALTH + ALIGN

- **Partner Retention:** Brands see immediate incremental revenue from product offers and elevated brand perception from clinician activation. Both improve retention of the private network inventory.
- **Align Same-Store Lift:** Exclusive, high-intent patients arriving via ScaleHealth improve utilization, median billed, and same-store growth without additional CAC.
- **Network Moat:** Every successful service activation strengthens the exclusive lead-flow story that differentiates ScaleHealth from pure retail media networks.
- **Operating Leverage:** The model requires no material fixed-cost step-up; the existing clinical infrastructure absorbs the incremental volume.

5. EXECUTION PLAYBOOK

Target Floors (Start Here)

Offer Type	Target Floor	Stretch Target
Product cross-sell / post-purchase upsell	≥ 10% acceptance	15%+
Service activation (low-friction)	≥ 5% lead-to-book	8–12%

Three High-Leverage Levers

1. Relevance Engine (Clinical Adjacency Scoring)

Score offers by purchase + condition data. Fertility / hormonal / recovery protocols should surface Physio offers at higher priority than generic product cross-sells. Relevance is the single largest controllable variable for service conversion.

2. Friction Kill on the Service Side

One-tap virtual consult or pre-qualified booking. Pre-fill benefit/insurance signals where possible. Brand the clinician as the partner's recovery specialist rather than a cold third-party referral. This is the highest-ROI conversion lever for closing the product–service gap.

3. Full-Value Measurement

Track contribution margin per accepted offer *and* downstream Align billings / sessions generated / 30-60-90 day LTV of the activated cohort. Click-to-accept alone understates the true value of the service path.

Recommended Test Design

Instrument both offer types in parallel on 2–3 live brand partners with the highest clinical adjacency (fertility, hormonal health, recovery). Sequence product offer first, then service framed as protocol activation. Force a true A/B on service friction (full booking flow vs one-tap consult request). Review full-value metrics at 30 days.

6. DATA SOURCES

1. Focus Digital — Average Upsell Conversion Rate: 2025 Report (1,847 digital businesses). <https://focus-digital.co/average-upsell-conversion-rate-2025-report/>
2. Aftersell — Health & Wellness Industry Benchmarks. <https://www.aftersell.com/industries/health-and-wellness>
3. Shopify Plus / Forrester 2025–2026 post-purchase and one-click upsell aggregates (via industry compilations).
4. Unbounce Conversion Benchmark Report — Health & Wellness landing page medians (5.1% overall, 8.2% wellness-specific).
5. Physiotherapy / clinical marketing benchmarks (cufinder, HMDG Private Practice Barometer, WordStream Health & Fitness Google Ads data).
6. Telehealth and health-app trial-to-paid ranges (Lifecycle Architect and related 2026 operator studies).
7. Internal Align Account Analysis v3.0 and CHI trajectory data (March–April 2026 run-rate).

7. IMMEDIATE NEXT ACTIONS

- 1 Select 2–3 brand partners with strongest clinical adjacency (fertility, hormonal, recovery).
- 2 Build hybrid offer surface: product first, then service framed as protocol activation.
- 3 Implement friction-reduced service path (one-tap consult / pre-qualified booking).
- 4 Instrument tracking of acceptance rate, contribution margin, and downstream Align sessions.
- 5 Run 30-day pilot; review full-value results against the floors in this study.
- 6 Feed winners into broader ScaleHealth automation and outbound systems.

Bottom Line

Product offers win the session. High-relevance clinical services win the relationship and the network. The private network's advantage is the ability to sequence both on a single high-trust surface. Execute the hybrid, kill friction on the service leg, and measure the full value chain.
